Abstract

(The abstract is included in the anonymized manuscript file; it may be repeated here or omitted on the title page per the editor's preference.)

Keywords: patent technology transfer, link prediction, graph neural networks, popularity bias, cold-start, evaluation methodology

CRediT authorship contribution statement

Sangwon Lee: Investigation, Data curation, Visualization, Writing – original draft. **Kyungseok Lee:** Conceptualization, Methodology, Software, Formal analysis, Writing – original draft, Writing – review & editing. **Jaewon Lee:** Software, Validation, Investigation. **Dongkyu Lee:** Conceptualization, Supervision, Funding acquisition, Writing – review & editing.

Declaration of competing interest

The authors declare that they have no known competing financial interests or personal relationships that could have appeared to influence the work reported in this paper.

*Corresponding author.
Email addresses: bu5119@hanyang.ac.kr (Kyungseok Lee), dongkyu44.lee@lge.com (Dongkyu Lee)

Declaration of generative AI and AI-assisted technologies in the writing process

During the preparation of this work the authors used Claude (Anthropic) in order to improve the language, grammar, and readability of the manuscript. After using this tool, the authors reviewed and edited the content as needed and take full responsibility for the content of the publication.

Funding

This research did not receive any specific grant from funding agencies in the public, commercial, or not-for-profit sectors.

Acknowledgements

[[Optional — add any non-funding acknowledgements (e.g., helpful discussions), or remove this section.]]

Data availability

The patent data were obtained from the Korea Intellectual Property Rights Information Service (KIPRIS) through its paid API (KIPRIS Plus, https://plus.kipris.or.kr) and were subsequently cleaned and processed by the authors. Because redistribution of these data is restricted by the KIPRIS terms of use, the processed dataset is not deposited in a public repository; it is instead available from the corresponding author by email upon reasonable request, subject to those terms. The preprocessing and evaluation code, experiment scripts, and an embedding-regeneration script are released at [[repository URL / DOI]], enabling full reproduction of all tables and figures.
